

Do your air ducts need cleaning?

Why is it necessary to clean air ducts?

- Excess dust in the air that you breathe can affect your respiratory health.
- Many respiratory diseases and illnesses are caused or aggravated by the quality of the ambient air one breathes.
- Your ventilation may not be working at full capacity.
- Your last cleaning was performed more than 5 years ago.

What are the advantages of cleaning air ducts?

- REDUCE your risk of allergies, asthma, irritated eyes and throat, migraines and sneezing.
- ELIMINATE air quality problems at the source – pollen, dust, grease, dead insects and construction debris may be accumulating in your air ducts and then spreading into your environment.
- NEUTRALIZE toxins that are found in air ducts such as microbes, bacteria, mould and other pollutants.

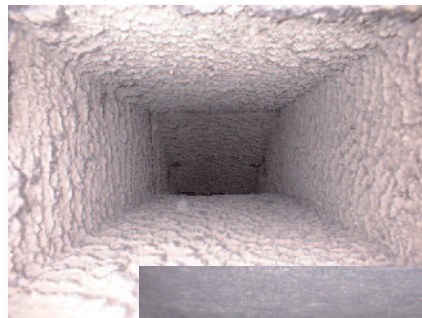

The results:

- Reduction in dust levels
- Elimination of micro-organisms
- Improved employee performance
 - i.e. better concentration and efficiency at work
- Improved ambient air quality
 - i.e. a healthy environment promoting better health
- Increased energy efficiency resulting in reduced operations costs

Our services:

- The installation, repair and cleaning of:
 - air exchanger systems and air ducts
 - exhaust and make-up air systems
- System inspection using digital camera and/or robotics
- Certificate issuance confirming the quality of the work and the frequency of cleanings necessary to maintain your ventilation system
